

МиГ-25РБ

Советский самолет-разведчик

В конце 60-х годов в ОКБ А. И. Микояна был разработан первый в мире истребитель-перехватчик со скоростью полета 3М – МиГ-25.

В это же время был сконструирован высотный разведчик-бомбардировщик, получивший название МиГ-25РБ.

Эти не имеющие аналогов самолеты-разведчики состояли на вооружении ВВС СССР (впоследствии – России), а также экспортировались в Ирак и Сирию. МиГ-25РБ ВВС Ирака использовались для бомбовых ударов во время Ирано-Иракской войны 1980-1988 г.

ВНИМАНИЕ!

Перед сборкой внимательно прочитайте руководство по монтажу. Каждая деталь пронумерована. Соблюдать последовательность монтажа. Необходимые рабочие инструменты: нож и напильник для зачистки деталей; резиновая лента, клейкая лента и зажимы для сушки белья для прижимания склеиваемых деталей. Детали из пластика очистить в растворе мягкого моющего средства и высушить на воздухе для того, чтобы краска и переводные картинки лучше прилипали. Перед приклеиванием проверить, подходят ли детали, клей наносить экономно. Хром и краску удалить с поверхностей склеивания. Небольшие детали покрасить перед тем, как они будут удалены из рамок. Краску необходимо хорошо просушить, только после этого продолжать сборку. Каждую соответствующую переводную картинку отдельно вырезать и примерно на 20 секунд окунуть в теплую воду. На обозначенном месте картинку отделить от бумаги и прижать промокающей бумагой.

MiG-25RB

Soviet Reconnaissance Plane

In the end of 60s the Mikoyan Design Bureau was developed the world's first interceptor fighter with speed of Mach 3 – the MiG-25.

At the same time high reconnaissance-bomber modification was designed, which was called the MiG-25RB.

These perfect reconnaissance planes served in Soviet (later – Russian) Air Force, and were delivered to Iraq and Syria. MiG-25RB Iraqi Air Force was used for bomb attacks during the Iran-Iraq war of 1980-1988.

CAUTION!

Read the instructions thoroughly prior to assembly. Each component is numbered. Adhere to specified sequence of assembly. Tools required: knife and file for removal of components from frame; rubber bond, adhesive tape and clothes pegs for clamping components together after applying adhesive. Clean plastic components in a mild detergent solution and allow to air-dry so that paint and transfers adhere better. Prior to applying adhesive, check to see whether the components fit together; apply adhesive sparingly. Remove chrome and paint from the contact surfaces. Paint small components before removing them from the frame. Allow paint to dry well, and only then continue to assemble. Cut out each transfer individually and immerse in warm water for approx. 20 seconds. Slide transfer off paper and into designated position, then press on with blotting paper.
