

МиГ-25БМ

Советский ударный самолет

В конце 60-х годов в ОКБ А. И. Микояна был разработан первый в мире истребитель-перехватчик со скоростью полета 3М – МиГ-25.

В это же время был сконструирован высотный разведчик-бомбардировщик, получивший название МиГ-25РБ.

Противорадарная модификация МиГ-25БМ на базе МиГ-25РБ производилась с 1977 г. (40 экземпляров). Она имела новую носовую часть и несла 4 противорадарные ракеты X-58У. Эти самолеты состояли на вооружении ВВС СССР (впоследствии – России).

ВНИМАНИЕ!

Перед сборкой внимательно прочитайте руководство по монтажу. Каждая деталь пронумерована. Соблюдать последовательность монтажа. Необходимые рабочие инструменты: нож и напильник для зачистки деталей; резиновая лента, клейкая лента и зажимы для сушки белья для прижимания склеиваемых деталей. Детали из пластика очистить в растворе мягкого моющего средства и высушить на воздухе для того, чтобы краска и переводные картинки лучше прилипали. Перед приклеиванием проверить, подходят ли детали; клей наносить экономно. Хром и краску удалить с поверхностей склеивания. Небольшие детали покрасить перед тем, как они будут удалены из рамок. Краску необходимо хорошо просушить, только после этого продолжать сборку. Каждую соответствующую переводную картинку отдельно вырезать и примерно на 20 секунд окунуть в теплую воду. На обозначенном месте картинку отделить от бумаги и прижать промокающей бумагой.

MiG-25BM

Soviet Strike Aircraft

In the end of 60s the Mikoyan Design Bureau was developed the world's first interceptor fighter with speed of Mach 3 – the MiG-25.

At the same time high reconnaissance-bomber modification was designed, which was called the MiG-25RB.

Strike anti-radar MiG-25BM modification on MiG-25RB base was produced since 1977 (40 examples). It had new nose with radar and 4 anti-radar X-58U missiles. These planes served in Soviet (later – Russian) Air Force.

CAUTION!

Read the instructions thoroughly prior to assembly. Each component is numbered. Adhere to specified sequence of assembly. Tools required: knife and file for removal of components from frame; rubber bond, adhesive tape and clothes pegs for clamping components together after applying adhesive. Clean plastic components in a mild detergent solution and allow to air-dry so that paint and transfers adhere better. Prior to applying adhesive, check to see whether the components fit together; apply adhesive sparingly. Remove chrome and paint from the contact surfaces. Paint small components before removing them from the frame. Allow paint to dry well, and only then continue to assemble. Cut out each transfer individually and immerse in warm water for approx. 20 seconds. Slide transfer off paper and into designated position, then press on with blotting paper.
